Pre-Conference Workshop (Optional)

Building Learning That Lasts: Applying Adult Learning and Memory Science — A Practical Workshop for Course Developers

Most training is designed to deliver content, but less attention is often given to how well that information is remembered and applied. This **interactive workshop** focuses on designing learning that sticks and supports real-world decision-making in policing contexts.

Participants will apply adult learning principles and insights from memory science to **transform passive content into interactive, scenario-based learning**, and will leave with a practical activity they can use in their own courses.

The session is **hands-on and application-focused**, with participants actively redesigning course elements throughout. In the week leading up to the workshop, participants will receive a few brief (two to three minute) pre-work emails to introduce key concepts and maximize time for practical work during the session, with optional follow-up refreshers to support continued application.

Please note that this is an **optional pre-conference workshop** on Tuesday, September 22. **Registration is required.**

Workshop Learning Outcomes:

- Apply adult learning principles to design relevant, problem-centred training for policing professionals
- Design learning experiences that support memory and retention, including the use of retrieval practice, spacing, and cognitive load management
- Transform content into interactive, scenario-based learning that supports decision-making and real-world application
- Incorporate microlearning strategies to reinforce learning over time
- Develop and refine a practical learning activity that can be used in their own courses
